

See change history on specific
pages/elements

toggle makes it so where html
elements highlight like cursor

< Back to inbox	Preview/edit toggle	Preview settings (change db setup)
New ticket: Ask questions/feature requests/bug fixes/etc.	<p>Drag to expand window sizes</p> <p>[Element selected]</p>	Drops down feature inventory ability to change db settings Some sort of chat interface so they don't have to select if they don't want to Can click on anything & chat interface will open to create a ticket.

Select an element and it opens new chat
UNLESS you're in an existing chat.

every time you click on an inbox item it takes
you to that page with correct DB settings.
Needs to change to that BRANCH to!!!!
(Probably vercel branch)

Viewing as: admin w/ 3 settings
applied
