First inbox message should show them MVP and say a lot of stuff isnt working but want to get rough draft done before we spend engineering time making stuff production ready, fixing edge cases etc.
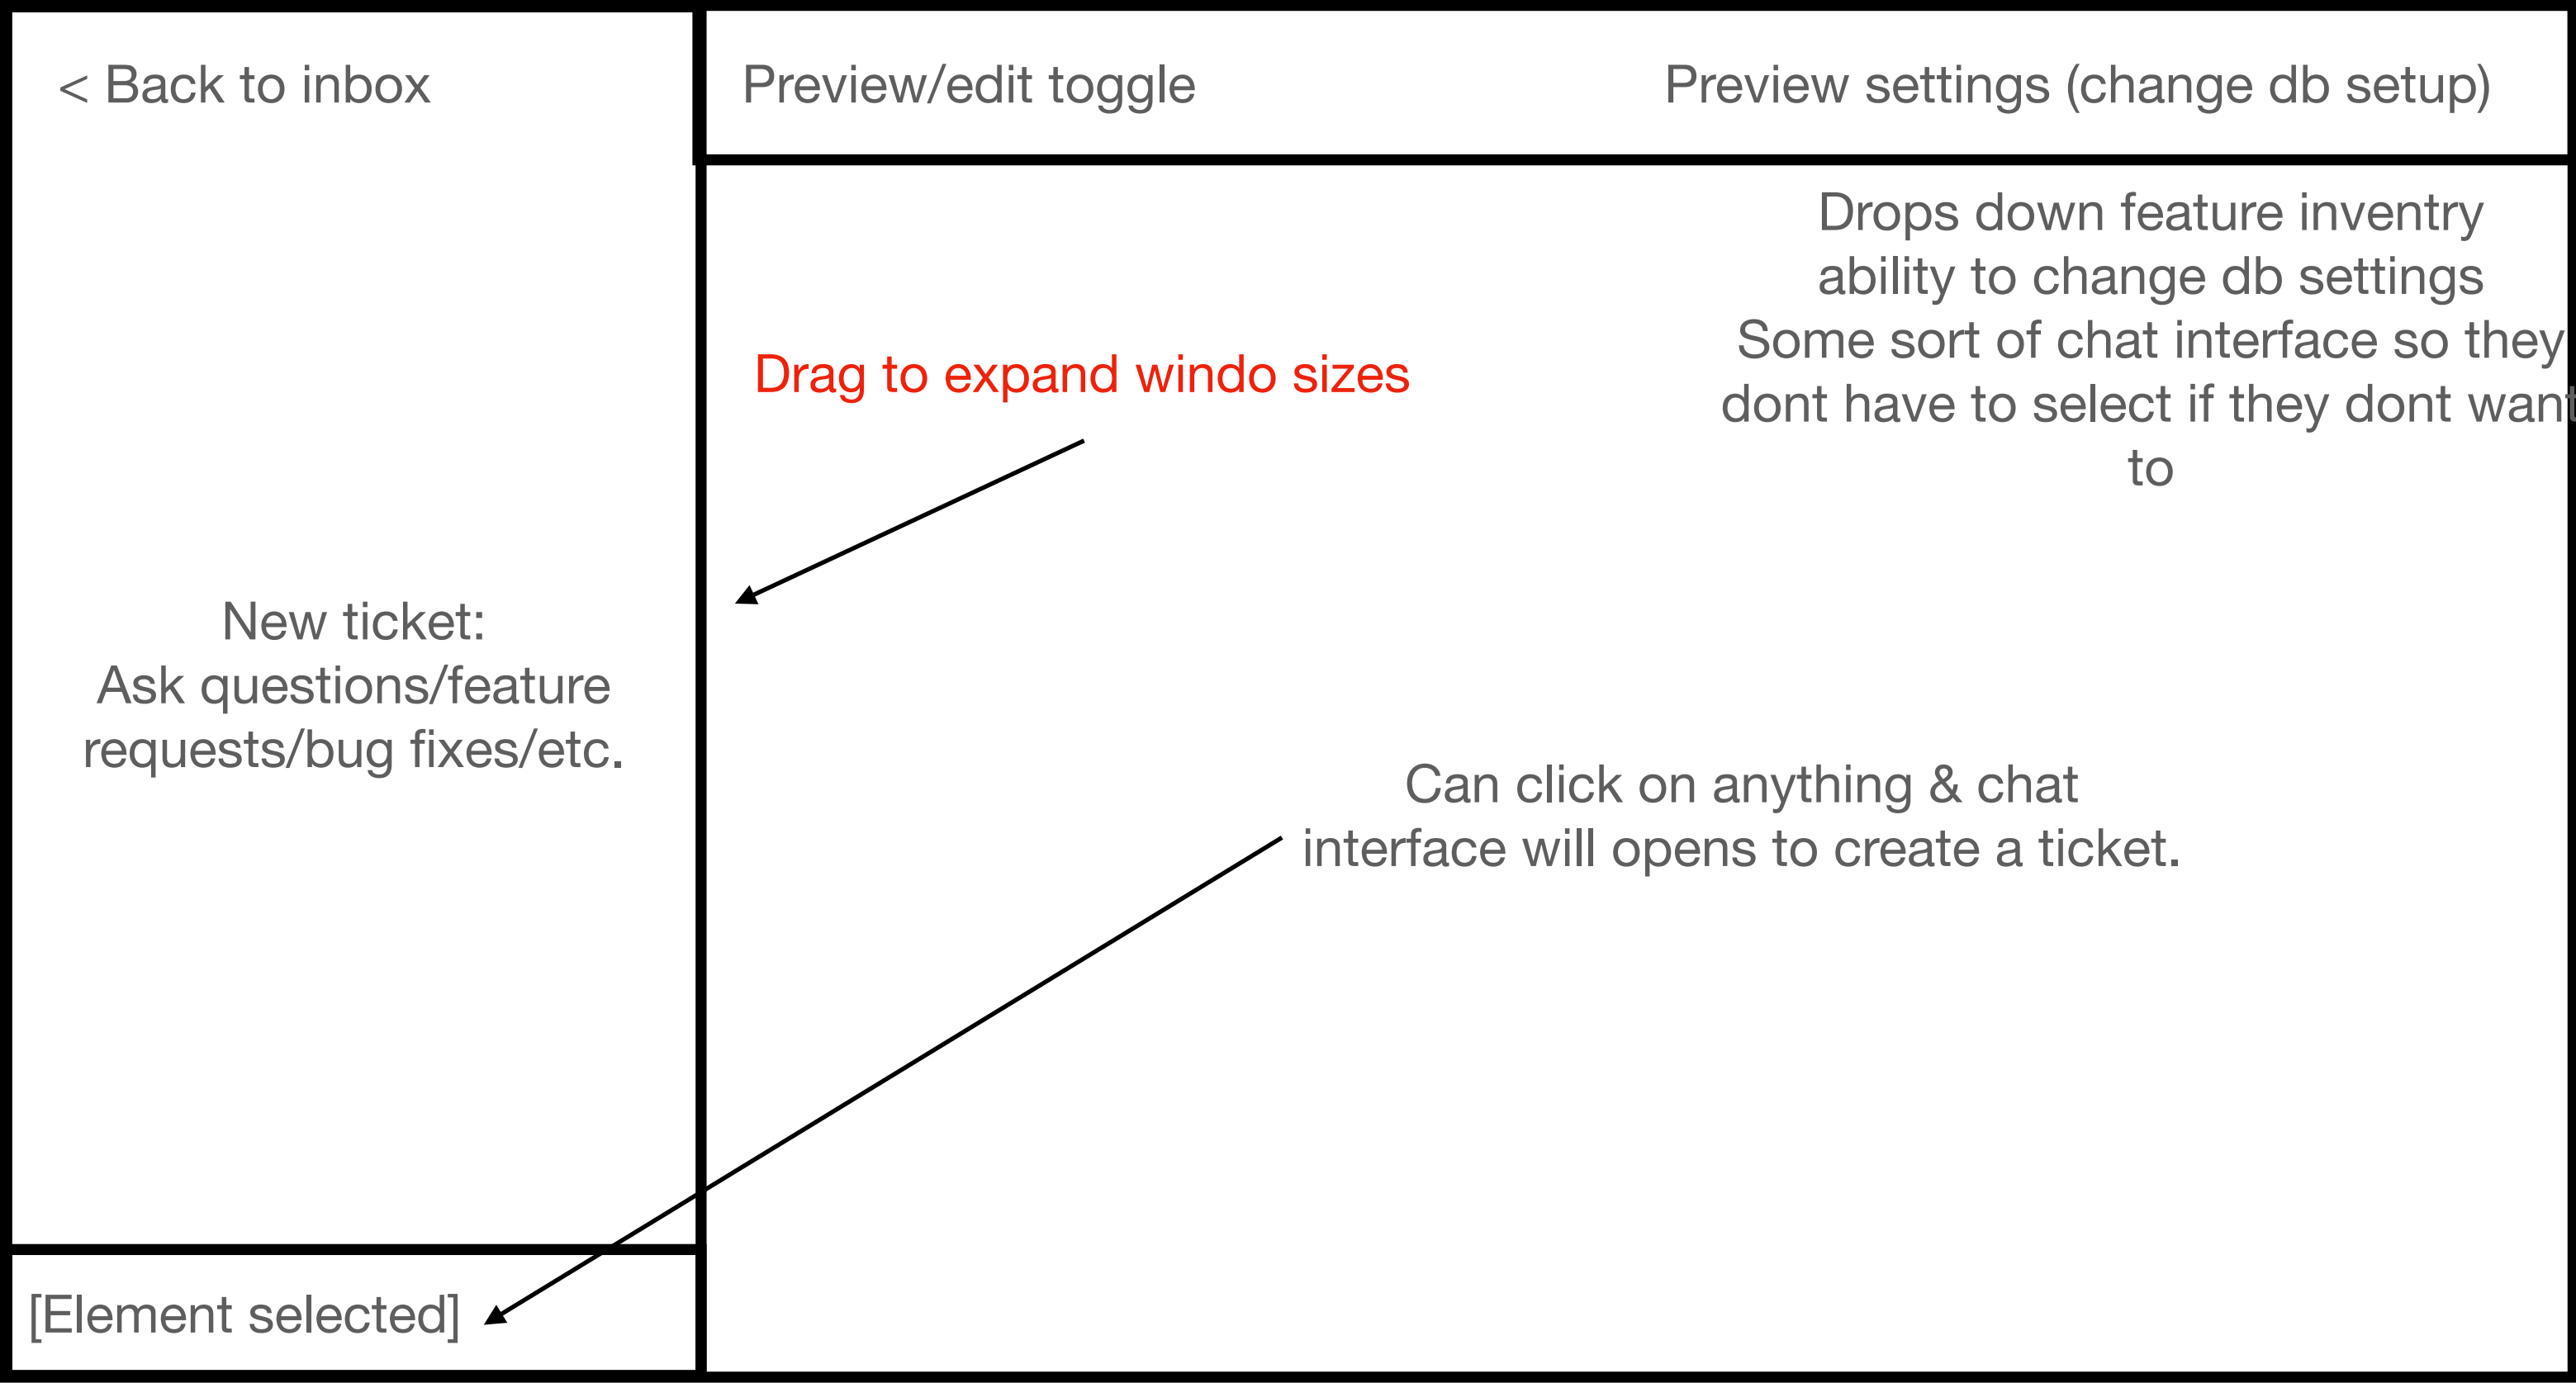

maybe create macro tickets and see what devs so (no documentation, no qa, no unit tests.

Then we should have a sperate step for refining

Should explain to users 80% of engineering time goes to getting the ast 20% done - this is the problem with most vibe coding and what we handle for you

See change history on specific
pages/elemnts

toggle makes it to where html
elements highlight like cursor

< Back to inbox

Preview/edit toggle   Preview settings (change db setup)

Viewing as: admin w/ 3 settir
applied

Drops down feature inventry
ability to change db settings
Some sort of chat interface so they
dont have to select if they dont want
to

Drag to expand windo sizes

New ticket:
Ask questions/feature
requests/bug fixes/etc.

Can click on anything & chat
interface will opens to create a ticket.

[Element selected]

Select an element and it opens new chat
UNLESS you're in an existing chat.

every time yoou click on a inbox item it takes
you to that page with correct DB settings.
Needs to change to that BRANCH to!!!!
(Probably vercel branch)
